

IBAN

IBAN - (**I**nternational **B**ank **A**ccount **N**umber) – international bank account number enabling an unambiguous client identification and automated payment processing. **It is obligatory to specify beneficiary's account in IBAN form with executing payments within the countries of the EU and the EEA.** Failure to do so is charged in terms of the [Service Charges](#)

TIP: For executing a payment outside the EU and the EEA we recommend you to verify the obligation of specifying the beneficiary's account number in IBAN form.

IBAN code structure is a combination of the ISO country code, bank code and client's account number as follows:

SK	2 characters for country code
nn	2 control characters
nnnn	4 characters for bank code
nnnnnnnnnn	16 characters for the prefix and number of client's account

*IBAN for the SR has 24 characters

[IBAN convertor](#): serves to detect the structure of IBAN code maintained with any of the banks in the SR.

[IBAN validator](#): serves to verify the IBAN code structure.

List of countries using IBAN code is available [here](#).
